

ABSTRACT OF THE DISCLOSURE

An element (21) for mixing a mass formed of a plurality of components has an input opening (28) for supplying the at least two components into the mixing element (21), an output opening (31) for discharging the mixed mass, and at least one flow channel provided between the input opening (28) and the discharge output (31), with the flow channel being oriented perpendicular to the direction of the input opening (28) or of the output opening (31).
